Slim is In

An area of innovation in mobile handsets has been making design more fashionable. It was only a matter of time until styling became more important with enhancements as well.

Enter Sudio's Silhouette...

At 13 mm thick, it's one of the first super slim, zero install hands free kits, a trend that's likely to become popular.

The Silhouette actually looks a lot like a mobile. It's pretty easy to use with only three buttons. Push the main panel for power, send/end, last number recall, voice dialling or to reject a call. Volume up and down can be adjusted using either of the side keys, and that's about it.

A row of colour coded icons is placed along the top of the unit (closest to you while driving). The Silhouette microphone is near that edge, in close proximity to your mouth when mounted on a sun visor.

Sudio's Silhouette is a full duplex product with noise reduction and echo cancellation to help calls sound clearer.

Unless you're a real power talker, it won't need

charging very often, with a Li-Polymer battery providing up to 12 hours talk time up to 500 hours standby time. Probably only needing a charge once a week for average users. An Auto Power Off function is also in place to preserve battery life.

At 100 grams, it's very light and portable, easy to move from car to car or carry in a bag or briefcase.

Options supplied for charging include both a USB cable for power from a computer and cigarette lighter charger.

It's good to know that this product is software upgradeable as well.

With the cost of a product like Sudio's Silhouette similar to a fine for talking on a phone held up to your face while driving, why wouldn't you buy one instead?

There's a dummy unit point of sale display with a shelf talker available for key retailers.
